Subject: Hyalite Creek

Tina,

Katie will be working on updating the assessment work on Hyalite Creek soon. We had a meeting with the TMDL planners and came to some agreement on how to move forward. We are pursuing not using the old 6 rock method data since we have newer chl a data for the middle segment below the reservoir. We will update the upper segment with data collected by ATKINS this past summer and delist all nutrients on the upper segment. The lower segment will stay as listings were. I will provide you with updated assessment excel files for the lower Gallatin TPA when we have them completed.

Thanks,

Darrin Kron
